PROFESSIONAL EXPERIENCE

Oregon State University | IT Support

Corvallis, OR | 2025 – 2026

Development of web components for the ServiceNow and Documentation portals, and resolution of production incidents, with FERPA certification for handling private student data.

- Cut incident resolution time by 10% by developing 7 Angular components in TypeScript, including a Microsoft Copilot chatbot and an AI-powered autocomplete system.
- Reduced ticket assignment time to IT technicians by 40% by integrating the documentation portal with the Microsoft Teams API using Angular and .NET.
- Wrote 50+ Python scripts to diagnose and resolve production errors, such as updating 400+ articles after DNS and Microsoft Entra ID changes.
- Restored the Microsoft Teams integration across 3,000+ articles after an unannounced API change, by rewriting the .NET backend of the affected components.
- The documentation portal's rating in the annual IT service survey rose from 3.5 to 4.5 stars, across 500+ staff respondents.

United Nations Volunteers (UNV) | Software Engineer

Remote | 2023 – 2025

Involved in 2- to 4-month projects for the platform itself and for offices across the UN system.

- **User privacy.** Redesigned the handling of personal documents across 50,000+ applications on a Java 17 REST API, replacing unilateral downloads by recruiters with a consent-based model.
- Split requirements into 2 microservices on Azure Functions, Azure Service Bus and Foundry.
- Added auditing and Just-In-Time access for 1,200 personal documents (passports) per year.
- **TransMonEE (UNICEF).** Reduced online dashboard latency from 3 minutes to 20 seconds over data from 56 countries, replacing a Node.js API with one written in Go on Azure App Service.
- **UNV platform.** Reduced lines of code by 12% by migrating 120 React class components to functional components with custom hooks.
- Co-implemented the first testing policy for those same components using Jest and Mock Service Workers, raising frontend coverage by 20%.
- Migrated 13 Tableau dashboards to Power BI, used by 200+ Marketing and Communications staff, configuring permissions and the semantic model.
- **Cooperación Sur-Sur.** Rebuilt the institutional WordPress site with PHP 8 and Laravel, adding a chatbot connected to OpenAI and a D3.js map, cutting landing page load time by 82.5%.

BlueScope | Software Engineer

Kansas City, MO | 2023 – 2024

Contributor to the migration of an on-premise database to Azure SQL; involved in building internal software tools for the Operations, Finance, CX and HR teams.

- **Ingestion API.** Accelerated the Power BI semantic model refresh by 75% by designing a Go API using the OData protocol, deployed as an Azure Container App to feed 35 dashboards.
- **CI/CD.** Raised the SonarQube-integrated coverage profile to 90% by building the microservice's Jenkins pipeline within a monorepo, packaged in Docker, with 15 integration tests on Testcontainers.
- **Data migration.** Converted 15 stored procedures from PL/SQL to T-SQL on the new SQL Server instance, including traceability of heat numbers and steel part batches, used by 600+ operators.
- Wrote 60+ PL/SQL queries for Oracle reports requested by HR, Customer Experience and Finance, including the profit and loss statement reviewed by the North American board.

- Replaced 35 Oracle Forms with high-impact Power BI dashboards, used by 2,000+ plant operators and the Finance department, reporting metrics such as CapEx and EBITDA.
- **Security testing.** Covered 20+ end-to-end and integration tests in SoapUI (WSDL) for the Java API connecting 7 steel plants to an Oracle replica on Azure via ExpressRoute.
- **Automation.** Cut the quarterly Qualtrics survey analysis cycle from 2 weeks to 2 days by building an Azure Function in Python with OpenAI integration through Azure Foundry.
- **Operations.** Served as on-call engineer for failures in data ingestion from SCADA servers across 25 North American plants, reviewing logs, checking for table and application corruption, deploying warm-standby services and fixing PL/SQL and Java code.

United Nations (UN) – ESCAP | Software Engineer (Intern)

Remote | 2022

- Defined a generic XML schema capable of representing treaties with heterogeneous structures, based on the analysis of a 150-document sample.
- Built the conversion pipeline for 5,000 treaties in PDF, hosted on Azure: OCR with Document Intelligence, identification of common elements via Regex, classification of ambiguous sections with LayoutLMv3, and metadata extraction with GPT-3.

EDUCATION

Master's of Engineering in Computer Science

2024 - 2026

Oregon State University | GPA: 3.83

Bachelor of Arts in Economics

2019 -2023

St. Mary's University of San Antonio | GPA: 3.84

TECHNICAL SKILLS

Skills: **AWS** (infrastructure behind Chrome extension ↗ with 1,000+ users), **Flutter** (Wordool ↗), **C++** (graduate coursework, video game ↗), **Blender** (Store ↗, Animations ↗), **Microsoft Excel**, **Siemens TIA v18**, **SCADA**.

Languages: **Spanish** (native), **French** (advanced), **Mandarin** (intermediate).

Certifications: **AWS Certified Solutions Architect – Associate** (2026), **AWS Certified AI Practitioner** (2026), **Azure Fundamentals (AZ-900)** (2026).
